Project definition:

The project **“To Supply Leftover Food to Poor”** aims to create a system in Salesforce to manage the collection and distribution of leftover food. It helps record venues that donate food, assign volunteers to collect it, and track drop-off points where the food is given to poor people. The main goal is to reduce food waste and help the needy through an organized process using Salesforce.

The project ensures that:

- Every food donation is recorded,
- Each volunteer’s activity is tracked, and
- The overall food distribution process is transparent and efficient.

Abstract

The project —To Supply Leftover Food to Poor is developed using Salesforce to manage the process of collecting and distributing leftover food. This system connects venues that donate food with volunteers who collect and deliver it to drop-off points for poor people. It helps in tracking venues, volunteers, and delivery locations through an organized digital platform. The project aims to reduce food wastage and ensure that excess food reaches those in need on time.

Objectives

- To collect leftover food from different venues such as hotels, banquet halls, and restaurants.
- To assign and track volunteers responsible for collecting and delivering the food.
- To maintain records of drop-off points where food is distributed to poor people.
- To create relationships between venues, volunteers, and drop-off points in Salesforce.
- To generate detailed reports showing which venues donated food, which volunteers were assigned, and where the food was delivered.
- To reduce food wastage and ensure that leftover food reaches needy people quickly.

Software Requirements

- **Platform:** Salesforce
- **Web Browser:** Google Chrome / Edge
- **Operating System:** Windows or macOS
- **Internet Connection:** Required for Salesforce access

Modules in the System

1. Venue Module

This module manages information about places that donate leftover food. Each venue record contains details such as:

- Venue Name
- Contact Email
- Contact Phone
- Address or Location

Functions:

- Add or update venue details.
- View related drop-off points.
- Assign volunteers to a specific venue.

2. Volunteer Module

This module stores details of volunteers who help collect and distribute the food. It contains fields like:

- Volunteer Name
- Gender

- Email
- Venue (lookup field)

Functions:

- Add or edit volunteer details.
- Assign volunteers to venues.
- Track volunteers' participation through related tasks or execution details.

3. Drop-Off Point Module

This module represents the locations where the collected food is distributed to poor people.

It includes fields such as:

- Drop-Off Point Name
- Distance (Distance__c)
- Venue (lookup field)

Functions:

- Add or update drop-off locations.
- Link drop-off points to specific venues.
- View reports to track distribution patterns.

4. Report Module

The report module combines all the data and presents it in a structured form.

Functions:

- Displays all venues, their linked drop-off points, and assigned volunteers.
- Allows filtering by created date, venue, or volunteer.
- Helps monitor food movement from collection to delivery.
- Provides transparency and accountability in the food distribution process.

Implementation

The project “**To Supply Leftover Food to Poor**” was created using Salesforce. It was built step by step to manage food collection and delivery.

Steps:

1. **Created Objects** – Venue, Volunteer, and Drop-Off Point.
2. **Added Fields** – Name, Email, Phone, Distance, and Lookup fields.
3. **Linked Objects** – Volunteers and Drop-Off Points were connected to Venues.

4. **Edited Layouts** – Added all fields to make data entry easy.
5. **Added Records** – Sample data like venues, volunteers, and drop-off points were created.
6. **Made Reports** – A report type —Venues with Drop-Off Points and Volunteers was created.
7. **Tested the System** – Checked data links and report results.

Conclusion :

The project **“To Supply Leftover Food to Poor”** was successfully developed using Salesforce. It helps manage the process of collecting leftover food from venues and distributing it to poor people through volunteers. All modules — Venue, Volunteer, and Drop-Off Point — work together to make the system easy to use and efficient. This project reduces food wastage and ensures that extra food is used to help people in need. It also shows how Salesforce can be used for social welfare and real-life problem solving. The system improves coordination between venues and volunteers by maintaining accurate records. It also saves time and effort by automating the food collection and distribution process. The project provides a clear and organized way to monitor food donations and volunteer activities. It also helps organizations make better decisions through detailed reports and data tracking. The system allows organizations to:

- Record venues donating leftover food
- Assign volunteers for collection and delivery
- Track drop-off points where food is distributed
- Generate reports showing the entire process clearly

By implementing this project, food wastage can be reduced, and the collected food can reach poor and needy people on time.
